DIGEST OF HEALTH STATISTICS
IN THE EUROPEAN REGION OF WHO

Library files 1980, 1982 1986

INTRODUCTION

The Regional Office for Europe of the World Health Organization started in 1982 to complement the existing statistical information with a Digest of Health Statistics. The present edition contains information on the Member States of the European Region, in a presentation similar to that of the indicators used in the Regional evaluation of progress towards Health for All in the Region. The years indicated for the Regional averages are purely notional, representing a "weighted average" of the years for which data are available. The Regional Averages are calculated only over those countries that have at least one year's difference between "Year 1" and "Year 2", though all countries having even a year's data appear in the tables.

Detailed analysis and further information on indicators will be found in the forthcoming publication "Seventh Report on the World Health Situation - European Region", to be issued shortly by WHO.

Although care has been taken to ensure comparability of data presented for the different countries, there are still a number of divergences, for instance in the case of physicians and of hospital beds, where definitions may vary from country to country.

The designations employed and the presentation of material do not imply the expression of any opinion whatsoever on the part of the Secretariat of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. The statistics relating to the Federal Republic of Germany and the German Democratic Republic include the relevant statistics regarding Berlin for which separate data have not been supplied. This is without prejudice to any question of status which may be involved.

The Epidemiology and Information Support Unit of the Regional Office will be pleased to answer any queries concerning the present issue of the Digest.
