Pictures for Teaching

The story of Yulia and Mukasa that was presented earlier in the book shows how HIV comes into a family, and what happens over several years. The characters are shown in pictures to make it more interesting. These pictures are reproduced in the following section for use during teaching.

The original TASO story, from which this version has been adapted, used symbols to help explain the processes of HIV infection, HIV transmission and development of AIDS-related conditions – using circles for HIV infection, squares for HIV antibodies and triangles for HIV-related symptoms. If you feel this makes the story easier to explain to others, you can add these symbols to the pictures in the following section. Other possibilities are to colour the clothing in some way or try to draw what is happening inside the body but cannot be seen on the outside.
