

IV. WORKING PAPERS

As presented at the WHO meeting. The content of the working papers is solely the responsibility of the authors.

Contents

1. Use of antimicrobials in food production – scope, policies and practices:	27
Growth enhancers	39
2. Antimicrobial growth promoters in animal husbandry	51
3. Approval procedures for antimicrobial growth promoters:	59
Aspects of risk assessment and risk management	61
Therapeutic uses of antimicrobials in food animals	
<i>Written paper not submitted; oral presentation made in Berlin</i>	
4. The rationale for use of antimicrobials in the animal industry in Malaysia	67
5. Safety requirements for antimicrobial animal drug products used in food-producing animals	73
6. Industry position with regard to the development, production and licensing of new agents	77
7. Antimicrobial licensing, controls and use in Australia in the human, veterinary and agricultural areas	83
8. Food animal antimicrobial usage policies and practices in Canada	91
9. Regulations, realities and recommendations on antimicrobial use in food animal productions in China	93
10. Use of anti-infective drugs in the UK – types of use and conditions/legislation for applications	101
11. Livestock and use of anti-infective drugs in Indonesia	105
12. Policies for use of anti-infective drugs in food animal production in Japan	111
13. Policies for use of antimicrobials, including conditions and legislation, in Malaysia	113
14. Some problems due to antibiotic resistance and application of feed antibiotics in Russia	115
15. Antibiotic disruption of microbial ecology	121
16. Antimicrobial use and antimicrobial resistance in pig production in Canada	129
17. Surveillance of <i>E. faecium</i> sensitivity in animals in Europe	133
18. Microbiological risks associated with fluoroquinolone use in food-producing animals	143
19. Macrolides as growth promoters and for therapeutic use in animals	151
20. Differences in the epidemiology of GRE in Europe and the United States	161
21. Resistance in zoonotic <i>Salmonella</i> in France	169
22. <i>Salmonella</i> and <i>E. coli</i> in England and Wales	173
23. Significance and sources of antimicrobial-resistant nontyphoidal <i>Salmonella</i> infections in humans in the United States	181
24. Epidemiology of antibiotic resistance: The example of <i>Salmonella</i>	183
25. Occurrence and epidemiology of resistance to virginiamycin and streptogramins	191
26. Quinolone resistance and <i>Campylobacter</i>
