BIBLIOGRAPHY ON EPIDEMIOLOGY OF CANCER
IN ANIMALS SINCE 1960

compiled by

The Veterinary Public Health Unit
World Health Organization
Geneva, Switzerland

INTRODUCTION

Part of WHO's programme in comparative oncology is to arouse greater interest in the epidemiology of cancer in animals. As one step in this direction, a list of references has been prepared dealing directly or indirectly with some aspect of the subject. A comprehensive review with an extensive list of references was published in 1962 by Professor Charles Lombard in his book "Cancérologie Comparée", C. Doin & Cie, Paris. Therefore, but for a few exceptions, we have started our present list at 1960.

By no means all articles listed deal specifically with epidemiology. Some only touch on certain aspects of it while others are included merely because they record the occurrence of a type of cancer in a particular area.

The articles listed refer mainly to spontaneously occurring tumours of domestic animals but a few on other animals are included.

It is intended to issue additional lists from time to time. Reprints and constructive criticism would be welcome.

Professor W. I. B. Beveridge
Consultant
Veterinary Public Health
Division of Communicable Diseases

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is essential for ensuring transparency and accountability in the organization's operations.

2. The second part of the document outlines the various methods and tools used to collect and analyze data. It highlights the need for consistent and reliable data collection processes to support effective decision-making.

3. The third part of the document focuses on the role of technology in modern data management. It discusses how advanced software solutions can streamline data collection, storage, and analysis, leading to more efficient and accurate results.

4. The fourth part of the document addresses the challenges associated with data security and privacy. It provides guidance on implementing robust security measures to protect sensitive information from unauthorized access and breaches.

5. The fifth part of the document explores the importance of data quality and integrity. It discusses strategies for identifying and correcting errors in data, ensuring that the information used for analysis is accurate and reliable.

6. The sixth part of the document discusses the role of data in strategic planning and decision-making. It highlights how data-driven insights can help organizations identify opportunities, assess risks, and make informed choices about their future direction.

7. The final part of the document provides a summary of the key points discussed and offers recommendations for further action. It encourages organizations to embrace a data-driven culture and invest in the necessary resources to maximize the value of their data.
