NOTES SUR LES UNITÉS GÉOGRAPHIQUES

NOTE ON GEOGRAPHIC AREAS

Il ne faudrait pas conclure de la présentation adoptée dans le *Relevé épidémiologique hebdomadaire* que l'Organisation Mondiale de la Santé admet ou reconnaît officiellement le statut ou les limites des territoires mentionnés. Ce mode de présentation n'a d'autre objet que de donner un cadre géographique aux renseignements publiés. La même réserve vaut également pour toutes les notes et explications relatives aux pays et territoires qui figurent dans les tableaux. Les « circonscriptions » (voir définition de ce terme dans le Règlement sanitaire international) sont présentées suivant les notifications reçues des administrations sanitaires.

The form of presentation in the *Weekly Epidemiological Record* does not imply official endorsement or acceptance by the World Health Organization of the status or boundaries of the territories as listed or described. It has been adopted solely for the purpose of providing a convenient geographic basis for the information herein. The same qualification applies to all notes and explanations concerning the geographic units for which data are provided. Local areas under the International Sanitary Regulations are presented as designated by health administrations.

INFORMATIONS ÉPIDÉMIOLOGIQUES

VARIOLE

Afrique

Basutoland. — Cinq cas de variole ont été enregistrés dans le District de Butha-Buthe pendant la quinzaine terminée le 4 novembre.¹ Les examens de laboratoire excluent la possibilité d'une varicelle. On pense qu'il s'agit d'alastrim ou de variole modifiée. La population va être revaccinée dans un rayon de dix miles; dans l'ensemble, on estime que 85 à 90% de la population du pays a été vaccinée au cours des sept derniers mois.

¹ Voir REH N° 45, p. 478.

EPIDEMIOLOGICAL NOTES

SMALLPOX

Africa

Basutoland. — Five cases of smallpox were reported in the District of Butha-Buthe during the fortnight ending 4 November.¹ Laboratory tests exclude a diagnosis of chickenpox, and it is assumed that these cases are *variola minor* or modified smallpox. The population will be revaccinated within ten miles of the outbreak; it is estimated that 85 to 90% of the inhabitants of Basutoland have been vaccinated during the last seven months.

¹ See WER No. 45, p. 478.
