15 DÉCEMBRE 1967

42^e ANNÉE — 42nd YEAR

15 DECEMBER 1967

MALADIES QUARANTENAIRES — QUARANTINABLE DISEASES

Territoires infectés au 14 décembre 1967 — Infected areas as on 14 December 1967

Notifications reçues aux termes du Règlement sanitaire international
 concernant les circonscriptions infectées ou les territoires où la présence
 de maladies quaranténaires a été signalée (voir page 552).

Notifications received under the International Sanitary Regulations relating
 to infected local areas and to areas in which the presence of quarantinable
 diseases was reported (see page 552).

x = Nouveaux territoires signalés.

x = Newly reported areas.

■ = Circonscriptions ou territoires notifiés aux termes de l'article 3 à la
 date donnée.

■ = Areas notified under Article 3 on the date indicated.

Pour les autres territoires, la présence de maladies quaranténaires a été
 notifiée aux termes des articles 4, 5 et 9 a) pour la période se terminant à la
 date indiquée.

For the other areas, the presence of quarantinable diseases was notified
 under Articles 4, 5 and 9 (a) for the period ending on the date indicated.

INFORMATIONS ÉPIDÉMIOLOGIQUES

EPIDEMIOLOGICAL NOTES

GRIPPE¹

INFLUENZA¹

Amérique

America

Etats-Unis d'Amérique (information en date du 2 décembre 1967). — Entre le 23 octobre et le 10 novembre 1967, une poussée d'affections d'allure grippale a affecté environ 3000 étudiants sur 18 500 à la *Western Michigan University*, à Kalamazoo, dans le Michigan. L'incidence maximale fut atteinte pendant la semaine terminée le 28 octobre. Environ 1000 étudiants se firent traiter par les services médicaux universitaires, et environ 2000 autres furent malades mais ne réclamèrent pas d'assistance médicale. L'infection à virus A2 fut mise en évidence par les examens sérologiques (tests d'inhibition de l'hémagglutination utilisant l'antigène A2/Taiwan/1/64). Pendant la poussée épidémique à l'université, l'absentéisme augmenta également dans les écoles publiques.

United States of America (information dated 2 December 1967). — Between 23 October and 10 November 1967, an outbreak of influenza-like illness affected approximately 3000 of 18 500 students at Western Michigan University, Kalamazoo, Michigan. The peak incidence was reached during the week ending 28 October. Approximately 1000 students sought medical care at the University Health Services, and an estimated 2000 more were ill, but did not seek medical assistance. Serological evidence of infection with virus A2 was obtained (haemagglutination inhibition tests using the A2/Taiwan/1/64 antigen). During the University outbreak, absenteeism also increased in Kalamazoo's public schools.

On observa en outre une affection semblable à Lansing, dans les écoles publiques du Michigan; l'incidence maximale se produisit pendant la semaine terminée le 25 novembre, où l'absentéisme atteignit 12 à 20 pour cent. Ici encore, l'infection à virus A2 fut mise en évidence par les examens sérologiques. L'isolement du virus est en cours.

A similar illness was reported in public schools in Lansing, Michigan. The peak incidence occurred the week ending 25 November, when absenteeism reached 12 to 20 per cent. Again, serological evidence of infection with Virus A2 was obtained. Attempts are presently being made to isolate the virus.

Une autre poussée d'affections d'allure grippale s'est produite début novembre dans les écoles publiques de Miami-Nord, en Floride, avec incidence maximale les 8 et 9 novembre. L'infection à virus A2 fut mise en évidence par les examens sérologiques de deux malades. Elle fut également mise en évidence vers mi-novembre chez un malade de Jacksonville, en Floride.

Another outbreak of influenza-like illness occurred in public schools in North Miami, Florida, in early November, with a peak in incidence on 8 and 9 November. Serological evidence of infection with virus A was obtained in two patients. It was also obtained in a patient from Jacksonville, Florida, in mid-November.

Asie

Asia

Japon (information en date du 7 décembre). — Depuis mi-novembre on a rapporté des poussées d'affections d'allure grippale dans plusieurs écoles primaires et intermédiaires des Préfectures de Tokyo et Aichi. Dans la région de Tokyo, l'épidémie a tendance à s'étendre progressivement.

Japan (information dated 7 December). — Since mid-November, outbreaks of influenza-like disease have been reported in several primary and middle schools in Tokyo and Aichi Prefectures. In the Tokyo area, the epidemic has a tendency to spread gradually.

Une souche de virus A2 a été isolée chez des enfants malades dans une école de Tokyo. Elle est presque identique, au point de vue antigénique, à celles qui avaient été isolées au Japon lors des épidémies de 1965 et début 1967.

A strain of virus A2 has been isolated from sick children in a school in Tokyo. It is antigenically almost identical with those isolated in Japan during the epidemics of 1965 and early 1967.

Europe

Europe

Norvège. — Pendant le mois de novembre, des poussées locales d'affections d'allure grippale se sont produites dans la partie occidentale de la Norvège. L'infection à virus A2 a été mise en évidence par les examens sérologiques.

Norway. — During November, local outbreaks of influenza-like illness have occurred in the western part of Norway. Serological evidence of infection with virus A2 was obtained.
