INFORMATIONS ÉPIDÉMIOLOGIQUES

EPIDEMIOLOGICAL NOTES

GRIPPE

INFLUENZA

Europe

France: Centre national de la Grippe, Lyon (information en date du 25 janvier). — Quelques cas sporadiques d'affections d'allure grippale ont été observés à Lyon. L'infection à virus A2 a été mise en évidence par les examens sérologiques.

France: Centre national de la Grippe, Paris (information en date du 27 janvier). — Depuis une semaine, une épidémie d'affections d'allure grippale s'est développée à Paris et dans les environs, ainsi que dans quelques autres départements. L'infection à virus A2 a été mise en évidence par les examens sérologiques. L'affection paraît être cliniquement grave chez les personnes âgées; plusieurs cas mortels ont été signalés dans un hospice de vieillards.

Tchécoslovaquie (information en date du 16 janvier). —¹ L'épidémie d'affections d'allure grippale, qui avait commencé en Slovaquie orientale pendant la seconde moitié de novembre et s'était étendue à d'autres régions du pays pendant les semaines suivantes, est presque terminée.

Vingt-quatre souches de virus grippal A2 ont été identifiées; elles diffèrent de A2/Singapore/1957 mais sont très proches des souches récentes de virus A2. Elles sont très difficiles à cultiver sur embryon de poulet.

Tous les groupes d'âges furent atteints, mais surtout les enfants d'âge préscolaire et scolaire, ainsi que les adolescents. Une enquête sérologique, faite peu avant le début de l'épidémie, avait montré que le niveau d'immunité de ces groupes d'âges vis-à-vis du virus A était inférieur à celui des autres groupes d'âges compris dans l'enquête. La bronchopneumonie fut la complication la plus fréquemment observée.

¹ Voir Nos 49, 1966, p. 634, et 4, 1967, p. 56.

Europe

France: National Influenza Centre, Lyons (information dated 25 January). — Some sporadic cases of influenza-like disease have been observed in Lyons. Serological evidence of infection with virus A2 was obtained.

France: National Influenza Centre, Paris (information dated 27 January). — In the past week, an epidemic of influenza-like disease has developed in Paris and the surroundings, and in some other départements. Serological evidence of infection with virus A2 was obtained. This disease appears to be clinically severe among old people, and several fatal cases were reported in an old people's home.

Czechoslovakia (information dated 16 January). —¹ The epidemic of influenza-like disease, which started in Eastern Slovakia during the second half of November and spread to other areas of the country in subsequent weeks, has almost ended.

Twenty-four strains of influenza virus A2 were identified; they differ from A2/Singapore/1957, but are closely related to recent strains of virus A2. They grow very poorly in chick embryo.

All age-groups were involved, but mostly children of pre-school and school age, and adolescents. In a serological survey made shortly before the epidemic began, it was found that these age-groups had a lower level of immunity against virus A than the other age-groups in the survey. The most frequent complication observed was bronchopneumonia.

¹ See Nos. 49, 1966, p. 634, and 4, 1967, p. 56.

Amendment to the table of transmissions

Bulletin épidémiologique radiotélégraphique quotidien de l'OMS
Daily Epidemiological Radiotelegraphic Bulletin of WHO

Les jeudis 9, 16 et 23 février, H B O 79 transmettra le Bulletin sur la fréquence de 19 625 kc/s (au lieu de 19 624,5 kc/s). Les observations concernant la qualité de la réception seront les bienvenues.

On Thursdays 9, 16 and 23 February, H B O 79 will transmit the Bulletin on the frequency of 19 625 kc/s (instead of 19 624.5 kc/s). Any comments on the quality of reception would be appreciated.

- A = Régions desservies par les stations de Genève-Prangins. — Areas reached by Geneva-Prangins Station.
B = Stations avec émissions quotidiennes. — Stations transmitting daily.
C = Stations émettant une ou deux fois par semaine. — Stations transmitting once or twice a week.

NOTE SUR LES UNITÉS GÉOGRAPHIQUES — NOTE ON GEOGRAPHIC AREAS

Il ne faudrait pas conclure de la présentation adoptée dans le *Relevé épidémiologique hebdomadaire* que l'Organisation mondiale de la Santé admet ou reconnaît officiellement le statut ou les limites des territoires mentionnés. Ce mode de présentation n'a d'autre objet que de donner un cadre géographique aux renseignements publiés. La même réserve vaut également pour toutes les notes et explications relatives aux pays et territoires qui figurent dans les tableaux. Les « circonscriptions » (voir définition de ce terme dans le Règlement sanitaire international) sont présentées suivant les notifications reçues des administrations sanitaires.

The form of presentation in the *Weekly Epidemiological Record* does not imply official endorsement or acceptance by the World Health Organization of the status or boundaries of the territories as listed or described. It has been adopted solely for the purpose of providing a convenient geographic basis for the information herein. The same qualification applies to all notes and explanations concerning the geographic units for which data are provided. Local areas under the International Sanitary Regulations are presented as designated by health administrations.
